

Get Your Home WINTER-READY!

Taking a few simple DIY steps now will keep you safe and warm all season long.

Leaks & Cracks

Seal leaks and cracks, especially around windows, doors, electrical outlets and pipes to save money and get rid of drafts.

Ice Damming

Clear gutters to protect against ice damming. An ice dam is a ridge of ice that forms at the edge of a roof and prevents melting snow (water) from draining off the roof, thus causing major damage.

Frozen Discharge Line Protection

Installing a Freeze Relief automatically prevents discharge line back-up and protects your home from ice and flooding, even in the coldest of weather.

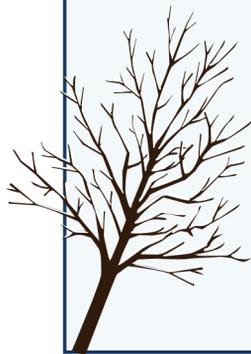

Temperature

Maintain a consistent temperature inside the home with the help of a programmable thermostat.

Sump Pump

Check your sump pump to make sure it is working properly, and install a battery backup in case the power goes out.

Tree Branches

Check tree branches and trim any that are close to your home or power lines to prevent damage during storms.

Insulation

Properly insulate your basement and crawl space with a Radiant Barrier and energy-saving spray foam insulation in the floor joists.

Street Outlets

Keep street outlets clear of snow and ice.
